

one world foundation

HISTORY

1984

Construction of „Bogenvillya“ (named after the bougainvillea flower).

1995

Establishment of the one world foundation - free education unit with the initial school consisting of one building with three classrooms, a teacher's flat and a garden; opening of the school with a focus on the subjects of English and general education (mathematics, Sinhalese, geography, history, hygiene, Buddhism etc.). The school is based on the British system and divided into pre-school (Montessori) and grades 1-11 (secondary education, advanced education). Graduates of the school receive a certificate.

Students: 100, teachers: 3

1996

The school is enlarged by one more building with two classrooms.

Students: 200, teachers: 5

1997

The school infrastructure is expanded with another building for vocational training and a sports field.

Students: app. 300, teachers: 9

1998

Opening of the Tailoring Centre providing one-year courses for app. 25 women between 20 and 30 years of age in the field of textiles processing. Each course finishes with a fashion show or an exhibition and graduates receive a diploma.

Students: app. 500, teachers: 12

1999

Introduction of a computer workshop (with seven work stations, two printers). In the summer of 1999, three computer specialists from Munich set up the new air-conditioned computer room and hold a four-week training course for ten IT trainers. Today, one of the graduates runs a computer workshop teaching computer basics as well as the use of programs such as Excel, Access and Power Point. The young children are made familiar with new technologies through games in order to rid them of their inhibitions and to enable girls to have equal access. A branch of the school is opened in a rented room in Nelligaskale which is eight km from Wathuregama but has no public transport facilities to enable the children to attend the one world foundation school. One teacher teaches small children in the morning and provides general education to older students in the afternoon.

Outpost: app. 80 students, 1 teacher

one world foundation

2000

In January 2000 we had 120 new registrations all of which were accepted. In grades 1-11, due to a lack of capacity only 50 of the 250 applicants could be accepted.

Students: app. 700, teachers: 15

2001

The number of school children was reduced from 700 to 500 to reduce the size of classes and to increase the quality of the education. Beginning of a co-operation with Margitta and Wolfgang Weber and their foundation Pro juventute Dortmund. Pro juventute assumes sponsorship of all of the pre-school classes in Wathuregama, Katuwila and Galwehera (some five km from Wathuregama) and launches a training programme for pre-school teachers in Colombo. Construction of a house on stilts next to the lagoon of Bogenvillya after a design by the architect Carl Pruscha. Based on a simple modular system consisting of iron, wood and glass, three transparent living units were created for the owf.

2002

Extension of the school facilities through the purchase of an adjoining piece of land. The building there offers space for a medical unit run by Dr. Paul Leyen. Thanks to 50 lab examinations (carried out in Vienna), free treatment can be provided to the school children.

2003

Restructuring of the educational programme with a stronger focus on English and occupational training (computer courses, tailoring) and of the pre-school (with the addition of a new class and four more teachers). Launch of the Women's Cooperation – women are given the opportunity to do training and graduate with a certificate. First phase: two school classes (tailoring/Wetekeja = typical Sri Lankan processing of mangrove plants to bags, table mats, etc.). Official founding of Women's Cooperation in November 2004.

2004

27 teachers instruct app. 500 children, young people and women in education units of various age groups and occupational training programmes.

Tsunami, 26 December 2004

The natural disaster which hit Sri Lanka on December 26 2004 destroyed the owf school facilities in Wathuregama. Since by government decree schools could no longer be built within a kilometre of the sea, the new school had to be reconstructed on a new piece of land further inland.

2005

Reconstruction of the basic infrastructure of the Bogenvillya building lasted until December. In addition to the unharmed schools in Galwehera and Katuwila arrangements were made for temporary accommodation of the pre-school units in a Buddhist temple in Balapitya, two kilometres from Wathuregama. In March an empty villa was

one world foundation

rented in Balapitya (later extended with open annexes) where the remaining units from Wathuregama found interim accommodation. The fast establishment of the temporary operation arrangements meant that the former capacity could soon be reached again. The search for a new school site began in January and in March a piece of land of about 16,000m² was acquired in Ahungalla, only one km from the destroyed former school site. Architectural planning was started at the beginning of February (architect: Carl Pruscha, assistance: Martina Püringer, Varuna de Silva; statics: Wolf-dietrich Ziesel) and the laying of the foundation stone took place in July. The main campus in Ahungalla was designed as a freely horizontally and vertically extendable, modular structure for about 500 pupils and extended by a further five units during the course of construction.

2006

Despite unusually strong monsoon rainfalls the concreting work could be completed in June while parallel work was carried out on the interior fittings of the elements. Construction of the built surface of 2,000m² was finished in only 16 months. On 9 December the new school campus was officially opened with a huge school festival and on 14 December the traditional end of term celebrations of all the existing owf pre-schools also took place at the new school in Ahungalla.

2007

On 6 January the regular school year was started on the new school campus. The temporary arrangements in Galwehera and Balapitya became a thing of the past. The owf – free education unit now includes a total of four pre-school classes, four English classes, two primary education classes, four computer classes, three tailoring classes of the Women's Cooperation as well as an adult education programme for mothers, a music class and physical education.

2008

In 2008 the increased intensity of the civil war in the North-East of Sri Lanka brought with it not only human suffering and economic hardship but also warnings against travelling to the country and thus fewer guests at one world foundation. On top of this, there were initial signs of the worldwide financial crisis. Although this also made it a difficult year for the owf, the number of students continued to rise and endeavours were aimed at further consolidating school operations only one year after the opening of the new campus in Ahungalla. Furthermore, a spacious garden loft was built on the owf Bogenvillya grounds which is now available to owf guests and brings additional income.

2009

On 30 March 2009 the owf lost its founding director Joseph Ortner, whose untimely death in Vienna came as a complete surprise. The burial of his urn took place in April in Sri Lanka. The founding director Kathrin Messner now runs the one world foundation alone. Unfortunately Joseph Ortner was unable to experience the end of the long lasting civil war, which was officially declared ended in May. In 2009, encouraged by this hopeful prospect for the peaceful coexistence of all ethnic and religious groups in Sri Lanka, the owf worked on the further professionalisation of the school operations. Co-operation was begun with state organisations (NAITA – National Apprentice and Industrial Training Authority, TVEC – Tertiary and Vocational Education Commission of Sri Lanka for Computer Courses) in order to be able to award graduates with internationally recognised certificates. The curricula were brought into line with state curricula and external examiners now oversee the final examinations at

one world foundation

the school, which follow the internationally recognised examination system NVQ (National Vocational Qualification).

Students: app. 1000, teachers: 31

2010

March 29 was an important day for one world foundation: During a “Memorandum of Understanding Signing Ceremony” at the school an agreement of co-operation was signed between one world foundation and the National Apprentice and Industrial Training Authority (www.naita.slt.lk). NAITA is a state organisation for the promotion of vocational training programmes in Sri Lanka. The co-operation means that important areas of the one world foundation – free education unit are now officially recognised as part of the country’s official education system. On 27 August 2010 one world foundation celebrated its 15th anniversary.

2011

Apart from our artist-in-residence programme one world foundation also started a writer-in-residence programme which is supported by the Austrian Federal Ministry of Education, Art and Culture. The curator of the programme is the Austrian writer Robert Menasse. The three months residencies are open to writers who either work on transnational and/or transcultural projects or who are interested in telling of a world we all share but do not always know. The two courses of the owf’s computer unit are now officially recognised by the Tertiary and Vocational Education Commission of Sri Lanka (TVEC) under their system of National Vocational Qualification (NVQ), i.e.: Computer Application Assistant (NVQ - Level – 3) and Computer Graphics Designer (NVQ) Level – 4). 90 students completed the above courses in 2011 and were qualified according to the NVQ-Levels 3 and 4.

2012

In January a new bungalow in the palm grove was inaugurated. This bungalow was financed by private sponsors and created after a design by the architect Carl Pruscha. It contains two spacious living units for our guests with large and partly roofed terraces. In summer the swimming pool, the kitchen, the laundry room and a part of the ayurveda unit were renewed.

2013

The new website of one world foundation was published (including many images and texts). Within the residency programme the following artists worked in owf: Christian Eisenberger, Theegulla Venkanna and Karunasiri Wijesinghe as well as the author Brita Steinwendtner. Furthermore the planning of a new bungalow for guests was initiated.

2014

Due to the great success of the photography workshops more courses were offered (under the direction of Elena Givone, Günter Mik and others). owf installed a darkroom for the students in order to provide them with access to training in analogue photography beside the digital standard. A blog was also created for the photo workshops. For regular updates, see: <http://flyingawaywith.tumblr.com/>. The following artists and authors worked in owf as part of the residency programme: Markus Hanakam & Roswitha Schuller and Ursula Mayer, Cordula Simon, Ilija

one world foundation

Trojanow and Andreas Weber. Under the direction of the Sri Lankan architect Varuna de Silva the construction works of the Araliya Bungalow were started.

2015

In January the Araliya Bungalow with its four guest rooms was opened in a ceremony. In 2015 the following activities are planned: The renovation of the Lagoon Bungalow, the renewal of the roofs of the yoga hut and the pool hut, and an improved acoustic insulation between the school rooms. For the 20th anniversary a comprehensive publication about one world foundation is being compiled.
